

Spring Data JPA

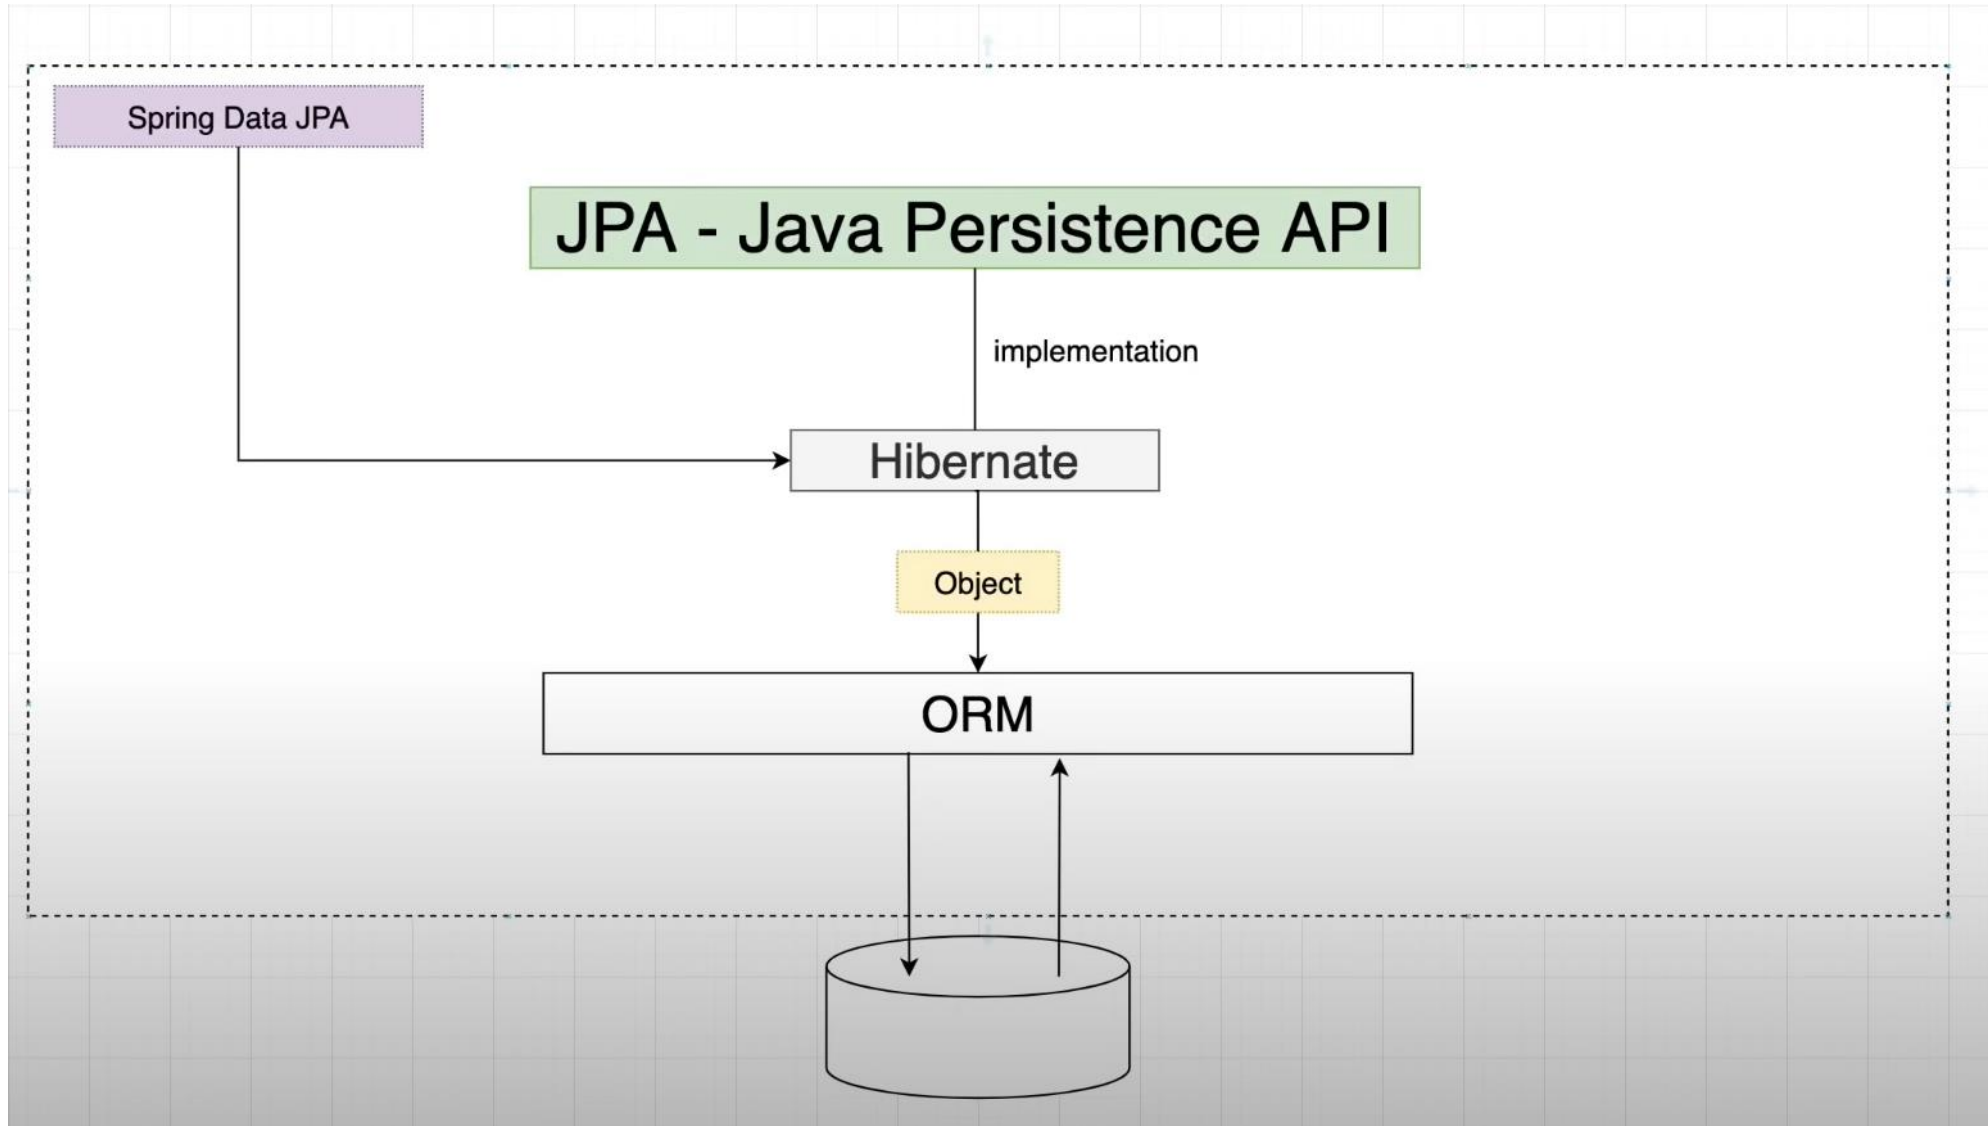

05-10-2023

Sri Pavan Sesha Sai Rallapalli

Key Terms

- Object-Relational Mapping (ORM)
 - Facilitates the seamless interaction between Java objects (entities) and relational databases.
- Java Persistence API (JPA)
 - Provides a framework for achieving ORM functionality in Java applications.
- Hibernate
 - Provides a framework for mapping an object-oriented domain model to a relational database.
- Spring Data JPA
 - Provides a higher-level abstraction on top of the Java Persistence API (JPA) to further simplify database operations.

Architecture

Conclusion

- Detailed information in

<https://github.com/GIScience/osmalert/blob/main/docs/technologies/spring-data-jpa/spring-data-jpa.md>
